oscarliang.com

CAREER DESCRIPTION

Robotics engineers work on integrated hardware and software systems to build intelligent machines that can effectively interact with the world around them. They may create prototypes, perform 3D-modeling, write programs, apply machine learning, conduct performance tests, and manage teams of people working on a project. Robotics engineers may work in industry or academia.

EDUCATION

- Bachelor's degree in mechanical, electrical, or computer engineering or related fields
- Master's degree in robotics or related fields is often preferred
- PhD may be needed for jobs in academia

SKILLS

- Programming (C++, Python)
- Computer skills (Linux, ROS, etc).
- 3D-modeling/CAD
- Prototyping skills
- Collaboration, teamwork, and communication skills

JOB OUTLOOK

Salary (Dec 2022)
